- White balance: Sets the proper color balance. Place a control light levels. (i.e. shutter speed, t-stop, gain).
- Exposure: The exposure encompasses the tools that
- when pushed. On release it will resume manual focus. Auto push focus: This button will override to auto focus
 - (i.e. interviews, narrative scriptive shooting).
 - Manual focus: Use for controlled situations, dame, parade).
 - Auto focus: Use for uncontrolled action (i.e. soccer

circuit by dividing the total lamp wattage by 100.

- . Jon can roughly estimate the load (in amps) on a houshold wattage (VV).
- A light's electrical measurement is usually measured by peyind your subject, unless you want the subject silhouetted.
 - Don't place bright lights such as a window or the sun cuanging color.
 - ND filters will cut down the intesity of light without C-4/s (a.k.a., wooden clothespins.)
 - Diffusion material can be clipped to barn doors using
 - Double diffusion material to increase its effect.
 - Diffusion material creates softer shadows.

 - White side reflectors are lower in contrast. Silver side reflectors give a higher contrast.
 - complimentary to flesh tones.
 - Gold side reflectors cast a warm light that is your lights.
- Lights get hot. Make sure to bring some gloves to handle
 - · Hard light can give dramatic results.
 - Soft light will help hide wrinkles.
 - Bring extra lamps (bulbs.)
- tlex discs) can fill in shadows and reduce confrast. • Bouncing light using white cards or reflectors (foldable
- .VI boog
- Monitor your lighting setup with a professional monitor or Limit the brightest and darkest areas of your composition. Kemember video doesn t nandle extremes in contrast well.

Lighting Tips

Directing Tips

- Prep Interviewees.
- Rehearse, but roll tape.
- · Divide scenes into shorter sections.
- Use cue cards or prompters. If using cue cards, hold them as close to the lens as possible.
- Shoot more than one angle of the same scene. Keep it simple. Don't tell actors more than they need to know.
- · Communicate succinctly and give your actors some specific suggestions.
- Clearly indicate where your subject(s) should be looking (into the camera or at an interviewer.)
- · Reassure your actors. Explain that this is not live television and that you will simply shoot until you get takes that work for everybody. Nobody will ever see the takes that don't work.
- . Don't let all the preparatory details of video production overwhelm your subject(s). Try to have lighting and prop arrangements completed before they arrive on the set. Keep the environment non-intimidating and friendly.
- Put the actors at ease. Keep the set warm and a little loose and you'll probably get stronger performances.

- Log takes.
 - 11004S •
- Reference Take 1, 2, etc (held right in front of the lens.)
 - Rehearse.
 - · Compose image.
 - 4 Loom in/hocus/200m out.
 - Image stabilization on/off.
 - Time/date stamp on/off.
 - Iribod lock-down.
 - Iape check.
 - Light check.
 - · 20nuq cyeck.
 - · White balance.
 - Check battery power.
- lime the number of spoken words at about 3 per second.
 - · Consult the storyboad and/or script.

Setting up a scripted scene

- Be aware of soft spoken subjects. capture the true behavior of your subject.
- While shooting, be as inconspicuous as possible to best

VIT OUT THE THE THE other bright sources.

Tips for Shooting Video

- Be careful of shooting a subject in front of a window or opvions horizontal planes (horizon lines, desks or buildings.)
- Be conscious of tilted shots. Level your camcorder using have a good reason not to.
- Ose the rule of thirds when composing shots, unless you Move the camcorder only when necessary.

- while the tape is rolling.
- Use Zoom in to compose your shot, but avoid zooming
 - Give the subject proper head and looking room.
- When shooting outdoors, keep the sun behind you.
- appear to stick out from the back of the subjects head. Avoid telephone poles and other objects that can

that it is a burden, but more than you can fit on a label. Iry to keep a log of what is on each tape. Not so much

- spaky than zoomed in shots. • When shooting handheld, wide shots will apear less
- Keep your average shot length between 5 and 10 seconds.
 - Use manual focus if your camcorder has it. being recorded properly to the camcorder.
 - · Check the audio with headphones to make sure it's a very full cup of hot coffee.
- For handheld stability, imagine that your camcorder is
 - Use a tripod or other camcorder stabilization.
- Keep the shot steady (do not overuse zoom or pan.)
 - Set white balance at every location. patteries charged.
- Keep the camcorder handy with blank tape and before and after each shot.
- Shoot pre-roll and post-roll with an extra 5 seconds tape before shooting your footage.
- Record at least 30 seconds at the beginning of a new tocus, and zoom out to compose the shot.
- To get the sharpest focus, zoom into subject's eyes,

Audio Recording Tips • Use an external microphone if you have one.

- . Get the mic close to the talent.
- Listen through headphones while you shoot.
- · Handheld mics are commonly used in news, especially in situations where there's little time to set up mics.
- · Lavalier mics are unobtrusive and stay close to your talent, which make them great for interviews.
- · Shotgun mics are great for focusing sound in a narrow area and work well at long distances.
- What you need to know about balanced audio is that it shields and phases out unwanted noise and interference.
- Line Level is generally 40-60 dB higher than mic level.
- Unbalanced line levels work well over moderate distances.
- Unbalanced mic levels tend to degrade past 25 feet.
- . Don't move mic cables while recording.
- Avoid long cable runs to minimize interference.
- Have extra batteries handy.
- Don't let your talent leave with your mic.
- Attenuators cut down a line level signal to make it acceptable for mic levels.
- Use an attenuator if your camcorder's mic input is mic level only.

Talent Release (to be read aloud on camera):

I, _____, give _____ the right to use my name, likeness, image, voice, appearance, and performance in a videotape program. This grant includes without limitation the right to edit, mix or duplicate and to use or re-use this videotape program in whole or part. I acknowledge that I have no interest or ownership in the videotape program or its copyright. I also grant the right to broadcast, exhibit, market, sell, and otherwise distribute this videotape program, either in whole or in parts, and either alone or with other products. In consideration of all of the above, I hereby acknowledge receipt of reasonable and fair consideration.

Spell out name as you wish it to appear in credits

Camera Menu Items Explained:

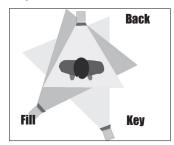

- Skin detail: Detects the image for skin and reduces the detail in that area, making a subject's skin look softer.
- Zebra patterns: (See Camera Controls section.)
- Vertical detail: Adjusts the images overall vertical detail.
 Adjust this to low to reduce jagged lines and moire from your image. Backgrounds with high amounts of horizontal detail will likely result in a moire pattern.
- Sharpness: Adjusts the sharpness of the overall image.
 A lower sharpness can also help reduce jagged lines or moire.
- **Spot meter:** Meters the amount of light in an specific spot rather than the average of the entire image.
- Recording mode: Regulates tape speed. For the best quality, select SP (short play) rather then LP (long play), unless it's more important to double your recording time.
- Audio mode: For best quality select the highest bit depth and rate. Usually 16-bit, 48kHz.
- Audio level: If manual option is available, use this first and set levels for each scene/subject.
- Image stabilization: If an optical system (OIS) is used, keep on full-time. If electronic (EIS), assess quality, then possibly use only when not on tripod.
- Zoom range: Unless extended range is critical, limit zooming to only the optical range, never digital.

Location Checklist:

- Choose a location that lends itself to the story you want to produce.
- Scout at the right time. Be aware that location lighting can change.
- Look at light. Most interiors generally feature low amounts of available lighting.
- Check light levels by shooting a few seconds of test footage with your camcorder.
- Check for power supplies. Is there a place to plug in a battery charger?
- Keep audio in mind when scouting locations, i.e. shooting near an airport may reduce quality sound use.
- Weather. Examine the elements, (sun, rain, wind, snow, heat, cold) and check the forecast.
- Decide where to set up. Make sure that there's adequate space for you to set up all of your gear.
- **Get permission.** Secure permits and other legal permissions to shoot at certain locations.
- Evaluate the area. Is there cell phone reception in the area you've chosen to shoot? If you're driving a long way, have you planned for a breakdown?
- Take notes, still photos or shoot a little video with a running audio commentary.
- Note the time of day, the quality of the light, the sounds in the air, and the things you felt. One day you might return.

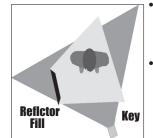

Light Setups

- Classic 3 point lighting
 - Key, Fill, Back

Reflectors and Diffusers

- · Use reflector to fill dark areas
- Use reflectors as bounce or rim light

- Diffusers-soften and spread light as it passes through
- Decreases light intensity

Packing Checklist:

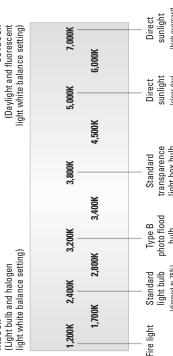

- Camcorder
- · Charged batteries
- AC power supply
- · Battery charger
- Tape stock
- Lens cap
- Cables
- · Lens cleaning cloth
- White-balance card
- Field monitor
- Script
- Tripod
- Tripod camera plate
- Lens filters
- Rain cover
- Gaffer's tape
- Black wrap
- Aluminum foil
- Headphones

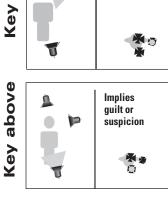

- Microphones
- Microphone batteries
- Cables
- Adapters
- Wireless transmitter
- Wireless receiver
- Light kit
- Extension cords
- 3-prong power adapters
- Gels
- Diffusion
- Extra lamps
- Power strip
- Stands
- Sand bags
- Reflector
- Heat resistant gloves
- Clothes pins/C-47s

Tip Sheet Printing and Folding Instructions

Printing

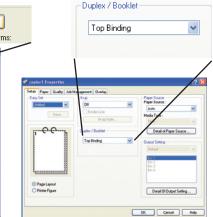

2. Open file, if you have a printer that can print double sided go to step 2, if not go to step 2A.

2. File/print.

To print double sided, choose Properties from print menu (may be Set Up on some printers). Print pages 1 and 2.

3. In the Properties menu, under Duplex/Booklet choose Top Binding.

Then choose print from all menus that come up after this one. Making sure to only print pages 1 and 2.

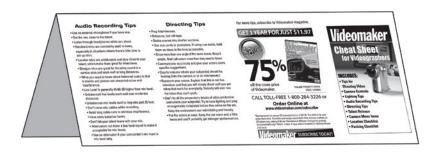

2A. File/print.

Print page 1.

Take printed page and insert into your printer for printing on blank side (printer's set up will vary) and print page 2.

The finished printout should have the back page with the talent release the same orientation as the title page with the Videomaker logo and the words "Cheat Sheet for Videographer".

Folding

1. With the back side towards you and the contents upside down, fold lengthwise, bringing the title page down to the bottom right.

2. Fold in half again along the shorter side.

3. Fold in half once more.
